

ACRYLIC GEL CHLORIDE FORM

ResinTech SBACR is an acrylic gel strong base anion resin in chloride form. The polymer has an open aliphatic structure which allows organic anions to exchange in and out of the resin more easily than anion resins based on a polystyrene polymer structure. SBACR is intended for use for the removal of NOM (naturally occurring organic matter).

APPLICATIONS

- Organic Removal Municipal
- Color Removal Municipal

TYPICAL PROPERTIES & PHYSICAL CHARACTERISTICS	
Polymer Matrix	Acrylic Gel
Ionic Form	Chloride
Fuctional Group	Quaternary Amine
Physical Form	Spherical Beads
Particle Size	10.00 50 45 Mesh (297 - 1)90 Jum)
% < 50 mesh (300μm)	S.
Minimum Sphericity	939 MIC 11
Uniformity Coefficient	1.7
Physical Form Particle Size % < 50 mesh (300µm) Minimum Sphericity Uniformity Coefficient Reversible Swelling Temp Limit Capacity (meq/mL)	CI to OH 12% to 15%
Temp Limit AP N. AT	150°F (66°C)
Capacity (meq/mL)	1.25
Moisture Retention	55% to 63%
Shipping Weight	43 - 45 lbs/ft³ (689 - 721 g/L)
Color	White to Cream
Regenerability	Yes

CERTIFICATIONS

- WQA Gold Seal
- Halal Certified
- Kosher Certified

PACKAGING OPTIONS

- 500 ml samples
- 1 ft³ bags
- 1 ft³ boxes
- 1 ft³ drums
- 7 ft³ drums
- 42 ft³ supersacks

ACRYLIC GEL CHLORIDE FORM

Capacity based on 2 gpm/cu.ft. flow rate, pH near neutral, and 36 inch minimum bed depth. Capacity is for TOC plus sulfate. No engineering downgrade has been applied.

ORGANIC TRAP

ResinTech SBACR has excellent capacity for tannins and other naturally occuring organic matter (NOM) which cause most of the color in potable waters. SBACR removes these substances and is easily regenerated with sodium chloride, in the same fashion as a water softener. Organic trap resins should be regenerated frequently to prevent the NOM from building up inside the resin beads and eventually causing fouling. For industrial applications it is sometimes useful to add a little caustic to the brine in order to increase capacity and reduce leakage. Use of chloride form anion resin reduces the pH of the product water during the early part of the exhaustion cycle.

Salt cycle Regenerant level Regenerant flow rate Regenerant contact time Displacement flow rate Displacement volume Rinse flow rate Rinse volume Service flow rate Average Flow Peak Flow

150°F 24 inches 25 to 50 percent 20 psi 0 to 14 SU
